Work experience

Project Engineer

From October 2023 to March 2025

Alluco- Groupe Demco Monastir, Tunisie

- Study and Design of projects using Solidworks and AutoCAD.
- development of aluminium profiles and accessories
- Finantial Estimation and Project Planning
- Definition, Management, and Follow-up of Specifications
- Maintaining constant communication between the engineering office and other

departments within the company.

Mechanical Design Engineer

From February 2023 to October 2023 Mecanometal Nabeul, Tunisia

- Spearheaded the design and development of mechanical parts while creating comprehensive assembly plans to optimize production efficiency using Solidworks and AutoCAD.
- Orchestrated and managed high-stakes projects by providing meticulously prepared materials, cost and time estimates, design specifications, and reports to ensure project success.
- Ensured the highest level of quality control for mechanical operations through meticulous inspections and providing expert technical support during production.
- Supervised and monitored production procedures, including laser cutting, bending, and laser welding, to ensure precision and adherence to project specifications.

Electromechanical Engineer (Internship)

From August 2022 to October 2022

Ets Abdelkader Mellouli Sousse, Tunisia

- Formulated design plans for mechanical components and prepared assembly instructions for production using Solidworks and AutoCAD.
- Oversaw the manufacturing process of a stainless steel cutlery sorting machine.
- Assembled intricate mechanical systems and components.
- Conducted thorough analysis of power and electrical control circuits and implemented wiring configurations.

Electromechanical Engineer (Internship)

From April 2022 to August 2022

Hôtel Movenpick Resort & Marine Spa Sousse, Tunisia

- Conducted thorough research and analysis to identify and resolve issues related to restoration.
- Investigated and studied the magnetic field, leading to the successful construction of electromagnets for manufacturing purposes.
- Designed and developed an innovative machine for efficiently sorting metal cutlery using Autodesk Inventor and AutoCAD.

Computer skills

Automation : Tia Portal V16, Step 7, WinCC Advanced

Language : Python, Arduino, C++,

Microsoft office : Excel, PowerPoint, Word

Achievements

Invention patent for a metal cutlery machine

Work experience

Mechanical Engineering Technician (End-of-Studies Internship)

From February 2019 to June 2019 NTR Cardridge Djerba, Tunisia

- Manufacturing an injection and blow molding machine for thermoplastic polymers.
- Electrical wiring of control and power circuits.
- Mechanical design parts using Autodesk Inventor and AutoCAD.
- Study and assembly of asynchronous motors.
- Machining of mechanical parts.

Education

Web Technologies and Systems Engineering

Since January 2025
isla - instituto politécnico de gestão e tecnologia Porto, PO, Portugal

Electromechanical Engineering

From January 2019 to October 2022
Private school Polytechnic Sousse, Tunisia

Bachelor's degree in Mechatronics

From September 2016 to July 2019
Institute of Higher Technological Studies Djerba, Tunisia
